

Project Design Phase

Proposed Solution

Date	06 NOVEMBER 2025
Team ID	NM2025TMID03796
Project Name	LEASE MANAGEMENT

Proposed Solution

The Lease Management System is designed to simplify and automate every step of the leasing process — from recording lease details to sending rent reminders and storing digital documents securely.

The system acts as a centralized platform where property owners, tenants, and administrators can efficiently manage all lease-related activities with transparency and accuracy.

This solution directly addresses the challenges faced in manual lease management, such as missed rent payments, misplaced documents, and lack of clarity between tenants and owners.

Key Features of the Proposed Solution

1. Centralized Lease Database

- Stores all lease agreements and tenant details in one place.
- Allows quick access and updates with full data integrity.

2. Automated Payment Reminder System

- Sends alerts to tenants before rent due dates.
- Reduces manual follow-ups and ensures timely payments.

3. Digital Document Management

- Upload, store, and retrieve lease agreements and related documents securely in the cloud.
- Prevents data loss and promotes paperless record keeping.

4. Dashboard & Analytics

- Provides property owners and administrators with real-time data visualization.
- Shows rent collection trends, active leases, and pending renewals.

5. User Authentication & Access Control

- Ensures that only authorized users can access or modify lease data.
- Maintains privacy and compliance with organizational standards.

6. Scalable and Cloud-Integrated Design

- Can handle multiple users, properties, and leases simultaneously.
- Easily scalable for small landlords or large real-estate companies.

Technologies Used

- Frontend: Salesforce Lightning / HTML / CSS / JavaScript

- Backend: Apex Classes / Node.js (optional alternative)
- Database: Salesforce Object Model or SQL
- Testing Tools: JMeter, Postman
- Deployment: Salesforce Cloud / Web Hosting Service

Benefits

- Simplifies lease management with automation.
- Eliminates paperwork and manual tracking.
- Increases transparency between property owners and tenants.
- Saves time and improves operational efficiency.
- Provides analytical insights for data-driven decisions.

Conclusion

The proposed Lease Management System effectively bridges the gap between property owners and tenants by combining automation, transparency, and data security in one digital platform. It not only improves workflow efficiency but also ensures accuracy, timely communication, and trust among all stakeholders.

By adopting this solution, organizations can reduce manual workload, prevent financial errors, and build a more organized leasing process, making property management smarter and more reliable for the future.
