

Ideation Phase

Brainstorm & Idea Prioritization

Template

Date	06 NOVEMBER 2025
Team ID	NM2025TMID03796
Project Name	LEASE MANAGEMENT

Lease Management Template:

This guided project demonstrates how to create a centralized Lease Management System that simplifies the process of handling property leases, rent tracking, reminders, and document storage.

It aims to reduce manual errors and improve transparency between property owners, tenants, and administrators.

The workflow begins by identifying challenges faced in manual lease tracking, followed by brainstorming ideas for automation, data security, and payment management.

Finally, a digital solution is proposed — a web or Salesforce-based platform that manages lease details, sends automated reminders, and generates analytical reports for better decision-making.

This ensures efficient management of leases, timely payments, and secure record storage — all of which help build trust and accountability in the real-estate process.

Step-1: Team Gathering, Collaboration and Select the Problem Statement:

Fig1: Image that represents team collaboration and idea selection.

In this phase, the team collaborated to identify key issues faced by property owners and tenants during the lease process.

Through online discussions and brainstorming sessions, the following problems were identified:

- Difficulty tracking lease renewals and rent due dates
- Misplaced or lost physical lease documents
- Lack of automated reminders or notifications
- Manual calculation of rent and dues
- Limited visibility into tenant payment history
-

After discussion, the final **problem statement** selected was:

“To develop an automated Lease Management System that tracks leases, sends reminders, stores documents securely, and provides analytics for owners and tenants.”

Step-2: Brainstorm, Idea Listing and Grouping:

Fig2: Image that describes the brainstorming and idea grouping process

Team members share ideas freely to explore solutions without judgment, encouraging creativity and participation.

Idea Listing:

All ideas from the session are written down to capture every suggestion and ensure no input is overlooked.

Grouping:

Similar ideas are organized into categories to identify patterns, highlight priorities, and simplify decision-making.

Action Planning:

Chosen ideas are turned into clear steps with assigned responsibilities and timelines.

Step-3: Idea Prioritization:

Fig3: Image showing prioritized ideas for the Lease Management System.

Idea prioritization was used to identify the most impactful and feasible features. Among all proposed ideas, Automated Payment Reminders and Lease Tracking Dashboard were selected as top priorities because they directly address the core issues faced by users.

Idea Prioritization Outcome:

- Focus on automation to reduce manual workload
- Enhance transparency for owners and tenants
- Secure document management for compliance
- Generate visual analytics for decision-making

This prioritization helped the team clearly define the project's direction. By breaking down complex processes into actionable components, development became more structured and efficient. Visual tools like flowcharts, Gantt charts, and data flow diagrams will be used in the next stages to communicate the workflow clearly.
