

Empathize & Discover

Date	06 NOVEMBER 2025
Team ID	NM2025TMID03796
Project Name	LEASE MANAGEMENT

Empathy Map Canvas:

The Empathy Map helps understand the users' emotions, needs, and pain points related to the lease management process. It allows the project team to think from the customer's perspective — both property owners and tenants — ensuring the final solution truly addresses their needs.

Empathy Map Table

Section	Description
Who are we empathizing with?	Property owners, tenants, and lease administrators using the lease management system.
What do they need to do?	Manage lease agreements, track payments, upload documents, and receive timely reminders.
What do they see?	Multiple manual records, disorganized files, and lack of transparency in rent tracking.
What do they say?	"It's hard to remember all payment dates." / "I keep losing lease copies."
What do they do?	Maintain Excel sheets, call tenants manually, store documents offline.
What do they hear?	Feedback from tenants about delayed updates and confusion about dues.
What do they think & feel?	Overwhelmed with paperwork, frustrated by inefficiency, and worried about data loss.
Pain Points	Lost records, delayed communication, missed payments, and low visibility of lease history.
Gains	A user-friendly digital system that automates rent reminders, stores documents, and improves efficiency.

💡 Example: How the Empathy Map Guides the Design

When designing the Lease Management System, the team analyzed that:

- Tenants often forget payment due dates, so automated notifications were added.
- Owners wanted clear reports and document history, leading to a dashboard module.
- Administrators needed quick access to lease data, prompting a searchable central database.

This understanding directly shaped the system features to match real user needs.
